skadii

SKADII FLOW

Whether winter or summer, people or cars, Skadii Flow counts **reliably, accurately and 100% anonymously**. Whether skiing, tobogganing or mountain biking at full speed, leisurely hiking on trails or waiting in the waiting area of a ropeway installation. The Skadii Flow cameras detect people and cars in defined areas. This allows, for example, to determine slope and car parks utilisation.

The Skadii Flow set, including an **outdoor camera** and an **AI Box**, can be set up in just a few steps. Thanks to the **Skadii Cloud connection**, you can analyze the utilization of your slopes, toboggan runs, mountain bike trails, hiking trails or car parks from anywhere and at any time, use available resources in a targeted manner and make the right investment decisions in the long term.

- + Highest reliability and accuracy**
Thanks to state-of-the-art AI technology
- + 100% anonymous and GDPR compliant**
The AI Box analyses the camera stream without storing videos
- + Skadii integration**
Access to live & historical data via smartphone, desktop and laptop
- + Save energy**
Use infrastructure and resources purposefully and efficiently
- + Increase safety**
Analyze utilization and compare with existing data
- + Invest correctly**
Identify popular areas of the infrastructure and necessary improvements
- + Hardware specifically for the mountain**
Outdoor aluminum housing, operating temperature from -20°C to +50°C
- + Easy to mount**
Mount the camera, connect the power, off you go
